## CROP SUMMARY FOR WEEK ENDING JUNE 5, 2005

The week of May 30 – June 5, 2005 began cool and dry, but ended wet, hot, and humid. The Commonwealth had to deal with some late week thundershowers which hampered planting and harvesting of many crops in some areas of the state. Days suitable for fieldwork were 4.3. Many farmers throughout the state are still in the process of cutting their first harvest of hay. Some have reported that the rain showers have reduced the quality of the hay that is being harvested. It is reported that the warmer weather is actually helping corn to grow. Full season soybean planting is continuing throughout the state and Virginia's tobacco crop is looking good. Many producers across the state are also beginning to harvest barley. Other farming activities for the week includes planting vegetables, sheep shearing, fence building, equipment repairs, sidedressing corn, scouting small grains for insects and diseases, and getting reports to FSA.
